## EXPLANATION OF THE PLATES

Unless otherwise noted the pottery is reconstructable (except sherds), of medium texture, moderately fired, fairly well made, shown at a scale of 1:5, and the pieces from Strata XX–XVI are handmade, those from Strata XV–IV wheelmade. For most of the pottery types only one example (usually the first found) was drawn; but, since it was decided to show drawings of the complete assemblage of types from each stratum (XX–VI), the drawing of the so-called “type pot” is repeated for all other strata in which the type occurred. Since all examples of a type may or may not have the same surface treatment, repeated drawings have where necessary been adjusted to indicate the respective surface treatments of the specimens which they represent. Hatching indicates wash; long pen strokes, either horizontal or vertical, represent burnish. In painted pottery the design on the type pot is usually similar to that on all other examples of the type and hence is shown on repeated drawings even though designs on the examples which they represent may vary slightly in detail. All examples of each type from each stratum (XX–VI) are listed in the tables accompanying the drawings, field numbers of pots actually drawn from originals being printed in boldface type. These tables, therefore, constitute a catalogue of typed vessels from Strata XX–VI; they include also vessels from Strata V–IV which are not published in *Megiddo* I.

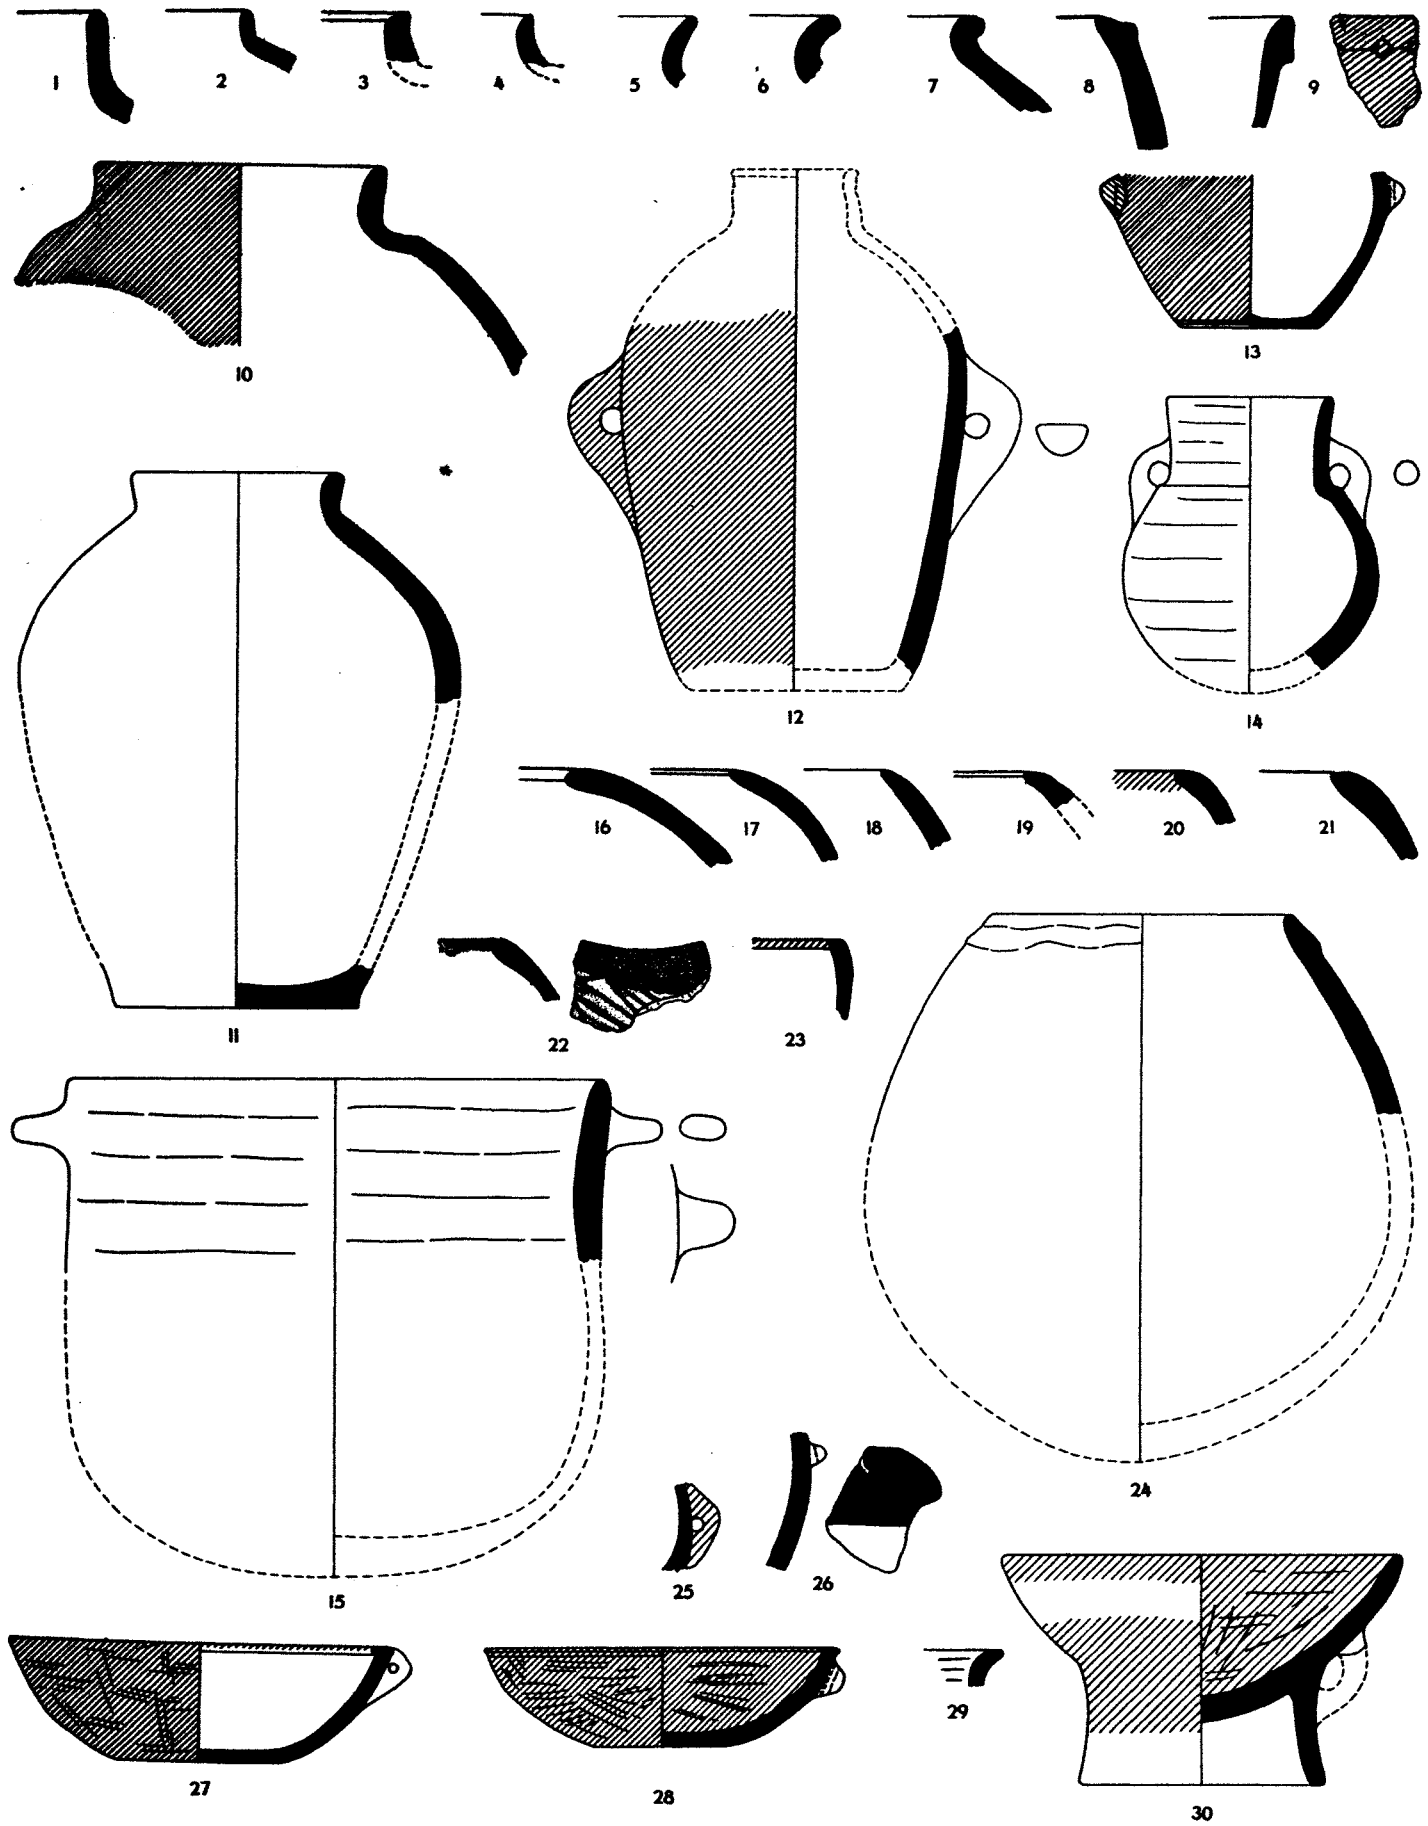

Other types of objects are shown at actual size unless otherwise stated. Except in the few cases where analyses are given, “bronze” and other materials have not been analyzed.

## PLATES 160-61.—CYLINDER SEALS AND IMPRESSIONS

We have been fortunate in being able to discuss each seal verbally with Professor H. Frankfort, upon whose kind and generous suggestions our classification is largely based.

No.	Field No.	Provenience	Stratum	Material	Remarks
1	d 584	Square N 12, debris	Ca. XVI	Bone	
2	d 321	E = T.5181	XIV	"	Drawing of seal rather than impression
3	d 222	T.5067	XII	Hematite	
4	c 538	= 4093	XI	Impression on sherd	Buff, numerous minute calcite grits, handmade, red wash outside; almost certainly originated in Stratum XIX, which may be readily equated to Megiddo Stage V, where similarly styled animals are found (see <i>SAOC</i> No. 10, Fig. 10 A-C) and where such ware is completely at home; Proto-literate to Early Dynastic (cf. Frankfort, <i>Cylinder Seals</i> [London, 1939] pp. 230-32)
5	c 223	N = 4027	X	Black stone	
6	d 113	5029	IX	Fayence	Imitation Kassite with (according to Dr. I. J. Gelb) meaningless writing; drawing of seal rather than impression
7	b 1181	3100, treasure hoard	VIII	Lapis lazuli with gold caps	
8	b 702	"	"	Lapis lazuli	Mitannian
9	b 134	T.3016	"	Steatite	"

18	d 1	"	"	Fayence	Popular Mitannian (Kirkuk) style; probably attributable to Stratum VII (cf. <i>Megiddo Tombs</i> , Pl. 95:33 [LB II]; <i>Four Canaanite Temples</i> , Pls. XXXIX 23 [Baisan VIII] and XXXVII 2 [Baisan VII])
19	M 5704	N = 1732	VI	"	Popular Mitannian (Kirkuk) style
20	M 5651	1740	"	Steatite	Hyksos; probably attributable to Stratum X or IX, chiefly because of a comparable seal from Tell el-Ajul city level II (Petrie, <i>Ancient Gaza</i> I, Pl. XIII 37), which produced the type of duochrome pottery characteristic of these strata
21	a 1290	Square K 8, edge of tell	?	Hematite	Second Syrian group (1700-1350; see Frankfort, <i>Cylinder Seals</i> , pp. 260-73)

6	a 934	E=2105	VIII	Blue stone	
7	M 6016	1829	VII B	Steatite	Convex bead seal. Dr. Gelb kindly examined this seal and gives the following statement: "It belongs to the class of perforated button seals. One side is occupied by the name of the owner written in Hittite hieroglyphic characters, the other by a picture of a dog (or panther, according to Bossert) and a few symbols. The form of the seal, the signs, and the pictorial representations are typically Hittite. The seal most probably dates from the time of the Neo-Hittite Empire (i.e., ca. 1400-1200 B.C.)." This seal recalls the fact that the ivory collection from the palace includes a plaque of Hittite character ( <i>Megiddo Ivories</i> , No. 44).

## BALANCE WEIGHTS

Nos. 11, 18, and 20-22 are poor criteria (see *Megiddo Tombs*, p. 7) for determining the ancient standard of weights, if any; the others (except Nos. 5, 6, 8) are good criteria.

## PLATES 171-72.—WHORLS

“Whorl” is a convenient term and is not intended to imply function. It is more than likely that the early dough-nut-shaped stone rings (e.g. Nos. 1, 2, 4, 7, 8, 11) are weights, the forerunners perhaps of clay loom weights (see Pls. 169-70). Specimens like No. 17 are known to be true whorls from actual association with spindles (see e.g. Pl. 197:2; *Megiddo Tombs*, Pl. 84; *Megiddo I*, Pl. 95:38).

## PLATES 192-95.—BONE INLAYS OF STRATA XII-IX RESPECTIVELY. SCALE, 1:2

No other category of objects appears and disappears as suddenly. It appears fully developed in Stratum XII (Pl. 192), continues apparently unchanged through Strata XI (Pl. 193) and X (Pl. 194), and dies out in Stratum IX (Pl. 195), where it has become somewhat decadent. A similar situation prevails in Tell Bait Mirsim E-D (see W. F. Albright in *American Schools of Oriental Research, Annual XVII* [1938] 49-51).

Only representative groups and pieces of these inlays are here shown. While the actual quantity found is far in excess of what is illustrated, every type is represented on the plates. The appearance in Strata XI and X of serpents and quadrupeds in addition to the ubiquitous birds (e.g. Nos. 8-12) leads one to wonder whether the two fragments in the upper corners of No. 13 might if turned other end up be representations of monkeys with long curved tails. The actual presence of black paste in the incisions of many of the pieces indicates a custom probably universal except in the usually late instances where the designs are little more than scratches incapable of retaining paste filling.

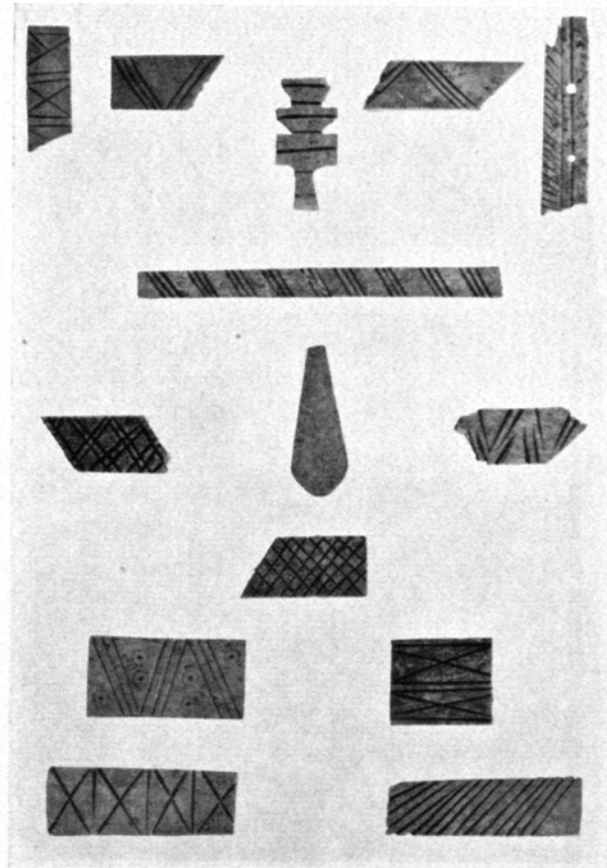

There can be little or no doubt of the use of these inlays as decoration upon small wooden funerary boxes placed near the shoulders of adult corpses (see e.g. Figs. 341 and 344).

## COSMETIC BOWLS AND COVERS OF IVORY, BONE COSMETIC STICKS

For bowls such as Nos. 1 and 2 with covers comparable with No. 6 in place see *Syria* XIII (1932) Pl. VIII 2, where specimens from Minet el-Baida<sup>3</sup> are shown. On the same plate may be noted a cover similar to No. 4 upon a boat-shaped bowl such as has been found at Megiddo both in MB II and LB I tombs and among the ivory collection (see *Megiddo Tombs*, Pls. 104 and 142:1; *Megiddo Ivories*, Pl. 31). From Structure II of the Fosse Temple at Tell el-Duwair comes such a cover with a small bird pegged into one of the center holes (*Lachish* II, Pl. XIX 19). Small drilled holes in the flattened edges of No. 8 may indicate attachment for "hinge" and "catch" projections as in No. 6. For numerous other examples of ivory covers from Megiddo see *Megiddo Ivories*, Pls. 12-13.

## IVORY "WAND" DECORATED WITH THREE INCISED GOLD BANDS

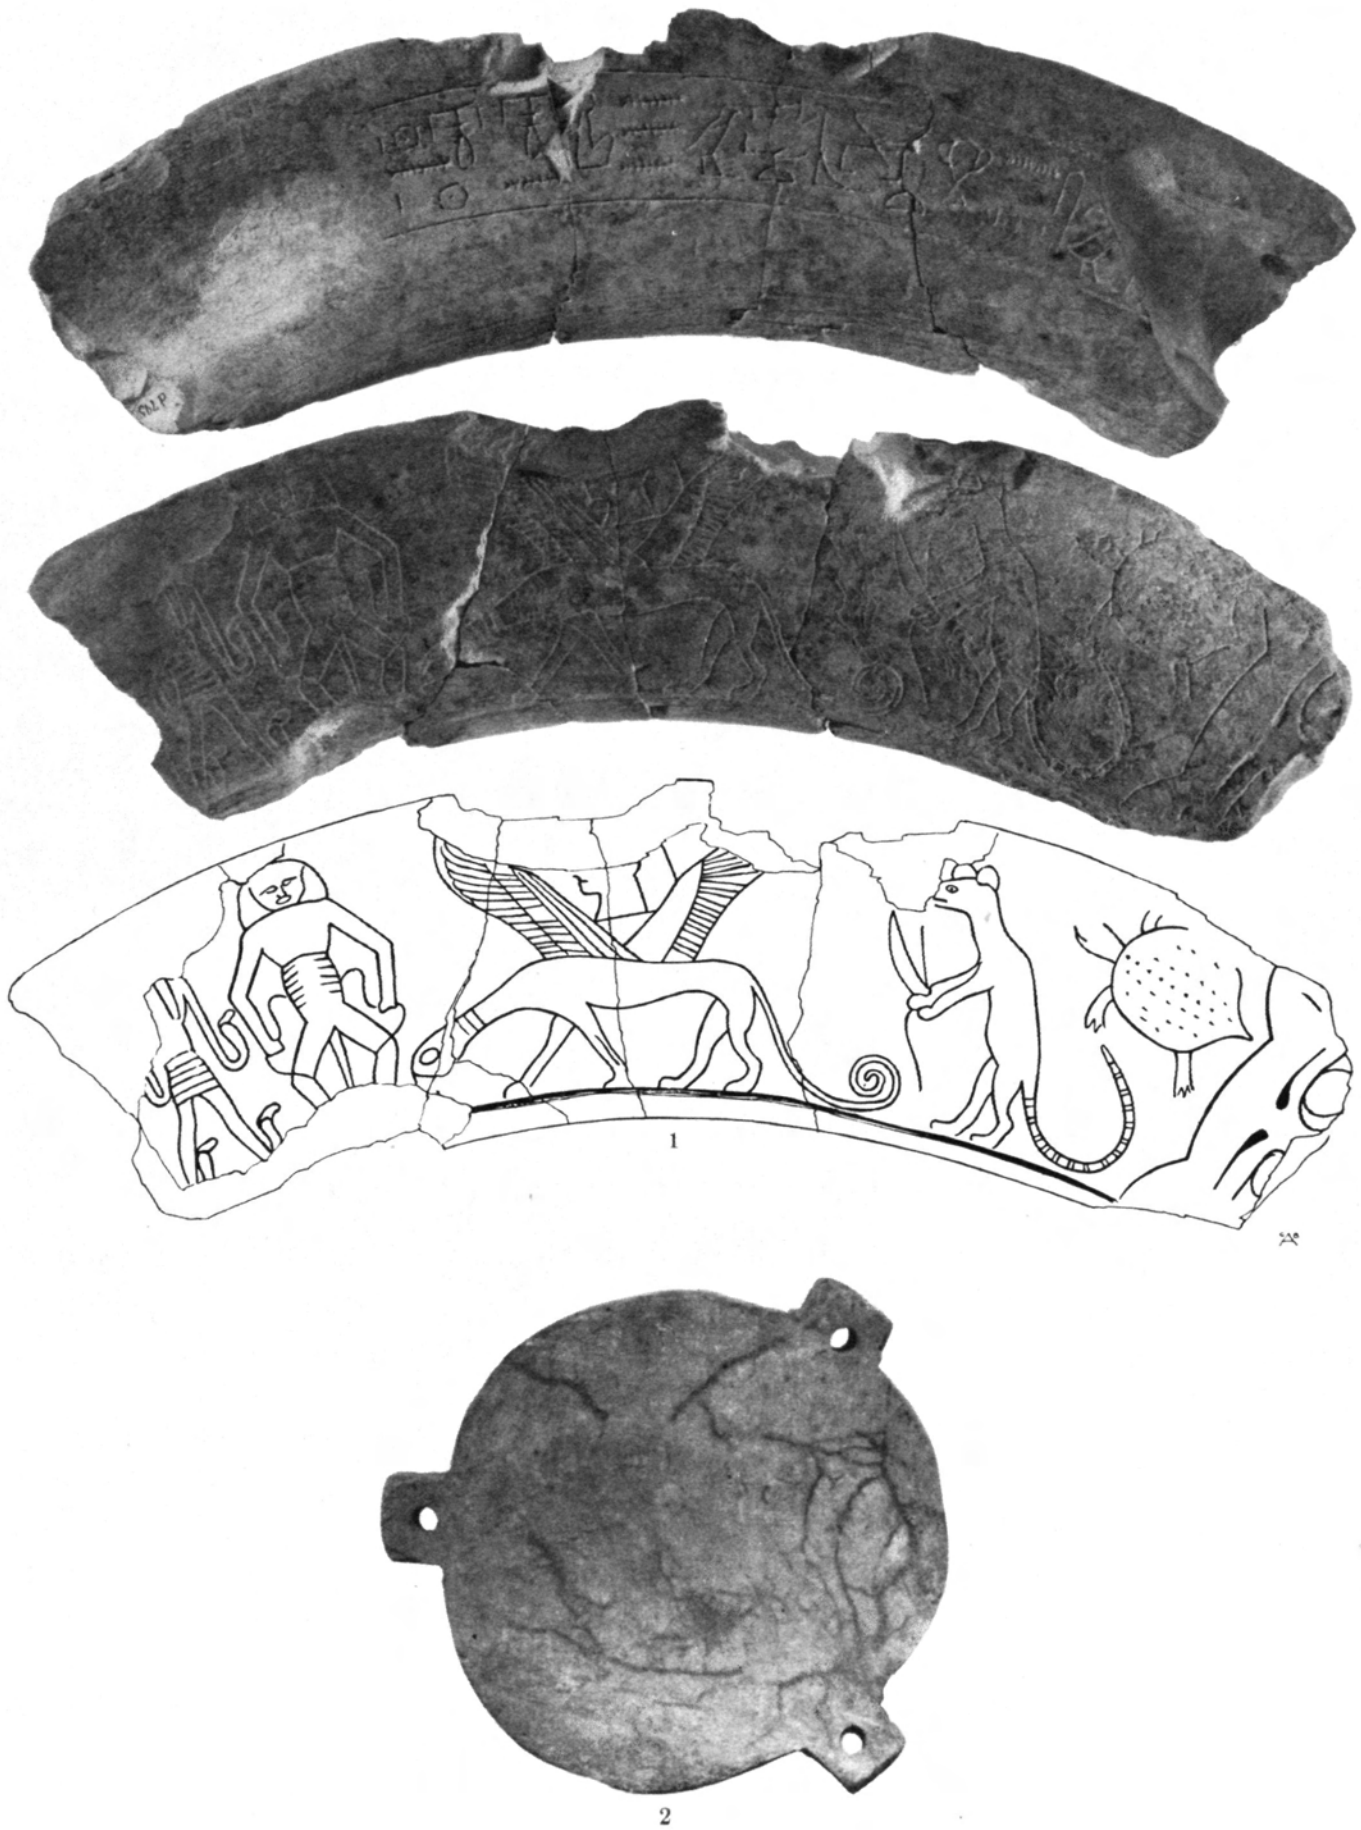

Field No.	Provenience	Stratum	Remarks
b 703	3100, treasure hoard	VIII	This object from the palace treasure hoard (see Figs. 57–58) is called a "wand" for want of a better term. Its use is uncertain, though one may reasonably associate it with symbolic "staffs" carried by Syrian tribute-bearers as depicted in Egyptian tomb paintings. For a discussion of these "staffs" see Pierre Montet, <i>Les reliques de l'art syrien dans l'Égypte du Nouvel Empire</i> (Université de Strasbourg, "Publications de la faculté des lettres," fasc. 76 [Paris, 1937]) pp. 48–50. An ivory "flask" from a cache in the shrine of Structure III of the Fosse Temple at Tell el-Duwair has been compared with this Megiddo object ( <i>Lachish II</i> , Pl. XV 1 and pp. 59 f.). A very doubtful parallel is a fragmentary "boomerang" or castanet" from Baisan VII ( <i>Four Canaanite Temples</i> , Pl. XLVII A 4).

“MAGIC WAND” OF IVORY, BONE SCALE-PAN(?)

No.	Field No.	Provenience	Stratum	Scale	Remarks
1	d 795	5262	VIII	3:4	This is a rare Palestinian example of the “magic wands” associated primarily, but not necessarily, with Middle Kingdom Egypt (see Petrie, <i>Objects of Daily Use</i> [London, 1927] pp. 39 f. and Pls. XXXVI–XXXVII). Though actually found in 18th-dynasty Stratum VIII, this piece may have an earlier origin, since it may have been involved in the debris excavated for the construction of an adjacent deep-set structure (locus 5239) extending in absolute levels down to Stratum XV. A fragment of such a wand, with design in relief however, found at Tell el-ʿAjul (Petrie, <i>Ancient Gaza</i> III [London, 1933] Pl. XXVIII 8) is from a level comparable with a level of Palace III, which Albright dates to the 18th dynasty ( <i>AJSL</i> LV [1938] 359). The two wands may therefore be contemporary. Unique on the Megiddo wand is the figure at the extreme left. For the inscription we quote John A. Wilson in <i>AJSL</i> LVIII (1941) 235 f.: “. . . . the inscription invokes magical protection ‘over the Lady of the House <i>Bʿ3twmw</i> ’, by night during the night and by day during the day.’ . . . . The assumed ʿ3 sign in the lady’s name is highly doubtful, but the name seems to be non-Egyptian in character.”

No.	Field No.	Provenience	Stratum	Material	Remarks
	d 721 b	5034	XIII A	Silver fragments in a lump	Found in jug d 721 a (Pl. 17:11). The Department of Antiquities in Jerusalem, Laboratory No. 683, submitted the following report: "The result of the analysis carried out on a cleaned piece of silver lump from Megiddo is as follows: silver 95.00% copper 4.54% gold 0.40% 99.94% It was interesting to note that, though the other pieces of the lump had about 5% of copper, the corrosion was a typical one of pure silver. The copper was not corroded, and no blue or green copper salts were apparent in the incrustation. The total weights of the pieces are 135 grams."
